

V7 PTT

PUSH TO TALK

PROFESSIONAL DYNAMIC HAND-HELD TALKBACK MIC

V7 PTT

The new V7 PTT is a dynamic, hand-held talkback microphone with a supercardioid polar pattern and a Push To Talk button.

It delivers the same crisp, open sound with impressive rejection as the V7 but now with a switch that makes it the perfect talkback mic for engineers, even in harsh, loud environments.

That means no more open talkback mics on stage.

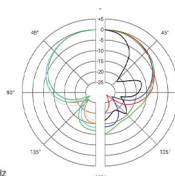

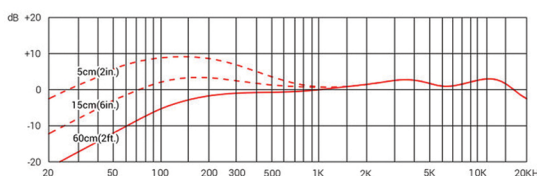

The V7 PTT's patented shockmount efficiently decouples the capsule from mechanical vibration, providing exceptionally low handling noise as compared to other mics in its class.

VIRTUALLY NOISELESS PUSH-TO-TALK SWITCH

The V7 PTT is based on the iconic V7 and delivers the same sound quality you already trust and love. It perfectly captures your voice in its most natural form and provides both impressive rejection and high gain-before-feedback.

FREQUENCY RESPONSE & POLAR PATTERN

- 125Hz
- 250Hz
- 500Hz
- 1KHz
- 2KHz
- 4KHz
- 8KHz
- 16KHz

The V7 PTT's carefully selected switch allows you to activate the Push To Talk feature without ever irritating the talent. It can seamlessly be pressed without any clicking noise on in-ear mixes, wedges, or PA.

The V7 PTT comes with a brand new mic cradle and several mounting options, ensuring a smooth and ergonomic experience.

INTUITIVE. SIMPLE. EASY.
